

journi

the human side of change, mapped as a journey

VALUE PROPOSITION & CUSTOMER FIT

THE PROBLEM

Most transformations still fail on the human side

~70%

of large-scale change initiatives fail to fully meet their objectives — not because the technology or process design was wrong, but because the people side was never systematically managed.

Widely cited across Kotter, Prosci and McKinsey change-management research.

Readiness data lives in spreadsheets and decks — no single, durable source of truth

ADKAR, Kotter, Lewin and Bridges get used inconsistently, project to project

Sponsors "ghost" — no record of the visible-sponsorship actions that predict success

Resistance surfaces after go-live, when it is far more expensive to fix

INTRODUCING

The human change-management system of record

It sits alongside — never inside — your project-delivery tools, and tracks the one thing they don't: whether the people affected by the change are actually ready, willing and able.

System of Record

Every score, justification and status change lives in one durable place — not a slide deck that goes stale the moment it is presented.

Framework Engine

ADKAR, Kotter, Lewin and Bridges are operational here — scored, justified, and audit-trailed, not reference posters on a wall.

Governed AI Layer

AI drafts and diagnoses across the platform, but every suggestion carries a mandatory human checkpoint before it counts.

CUSTOMER PROFILE

Who journi is built for

ORGANIZATION PROFILE

Mid-to-large enterprises (500+ employees) running several concurrent transformation programs

Consulting firms delivering Organizational Change Management as a managed service

Proven across Manufacturing, Logistics & Transportation, and Health — extensible to any sector

Francophone / multilingual footprints where English-only tooling is a real adoption barrier

BUYER PERSONAS

Change Management Lead / Director

Primary user — owns adoption of the tool day to day

PMO / Program Director

Co-buyer — wants the PM ↔ CM governance bridge closed

Executive Sponsor / Steering Committee

Economic influence — wants defensible go/no-go evidence

What our customer is trying to get done

Functional job

- › Score ADKAR readiness per cohort, not just the whole population
- › Prove sponsorship is active and visible, not assumed
- › Sequence communications without saturating the population
- › Resolve resistance to closure, with a documented root cause
- › Report readiness to executives in language they trust

Social job

- › Be seen as running change management on data, not instinct
- › Show a Steering Committee real evidence at every phase gate
- › Speak the vocabulary each stakeholder already knows

Emotional job

- › Know nothing is falling through the cracks before go-live
- › Feel confident defending a go/no-go call after the fact

Pains — what makes this job hard today

Readiness data scattered across spreadsheets, decks and inboxes, with no historical trail

Frameworks (ADKAR, Kotter, Lewin, Bridges) applied inconsistently, project to project

Sponsors "ghost" — no record of the visible-sponsorship actions that predict success

Resistance surfaces late, after go-live, when it is expensive and disruptive to fix

AI pilots deployed with no governance — no audit trail, no human checkpoint

PMO and Change Management run as two disconnected worlds with no shared timeline

Gains — what would make this job easy

One system of record spanning the full change lifecycle, tenant setup to sustainment

A defensible, timestamped justification trail behind every score and status change

Real-time executive visibility — a Composite Readiness Index benchmarked by phase

Faster, evidence-based resistance resolution with root-cause pattern detection

AI acceleration with governance built in — human checkpoint on every suggestion

A multilingual, RTL-ready interface for global and francophone-Africa teams

What journi delivers: 22 integrated modules

One shared data model, organized into the platform every project draws on, and the 16-module program lifecycle a practitioner runs day to day.

PLATFORM & GOVERNANCE

- › M1 Tenant & Org Hierarchy
- › M2 Identity & RBAC
- › M3 OBS
- › M4 Process Registry
- › M5 CM Charters
- › M6 AI Use Case Library

CHANGE MANAGEMENT PROGRAM (M7-M22)

- › M7 Initiative Registry
- › M8 WBS & Gantt
- › M9 Stakeholder Mapping
- › M10 ADKAR Engine
- › M11 Emotional & Transition
- › M12 Risk Register
- › M13 Sponsor & Coalition
- › M14 Communications
- › M15 Training
- › M16 Resistance
- › M17 Manager as Coach
- › M18 Journey Map
- › M19 Journeys & Analytics
- › M20 Analytics
- › M21 Sustainment
- › M22 Field Notes

Pain relievers — how journi removes each pain

Scattered data

One project record across 16 lifecycle modules — nothing lives in a separate deck

Inconsistent frameworks

ADKAR, Kotter, Lewin, Bridges layered on one shared, framework-agnostic data model

Sponsors "ghost"

Sponsor visibility tracker + signed Charter compliance log, not a verbal promise

Late resistance

Structured Resistance Log with systemic-pattern detection and an AI root-cause classifier

Ungoverned AI

14-use-case governed library — Assistive/Augmented tiers only, mandatory human checkpoint

Executive blind spot

Composite Readiness Index, benchmarked by phase, with an AI-drafted executive narrative

Gain creators — not just features

Defensible governance

A justification-governed audit trail behind every ADKAR, Lewin, Bridges and status change

Executive visibility

Composite Readiness Index, benchmarked against phase-appropriate reference bands, live

Adapts without a code change

A runtime-editable Permission Matrix — reshape RBAC to your org structure in minutes

Time saved, no new risk

Governed AI drafts, diagnoses and classifies — a human always approves before it counts

One tool, every geography

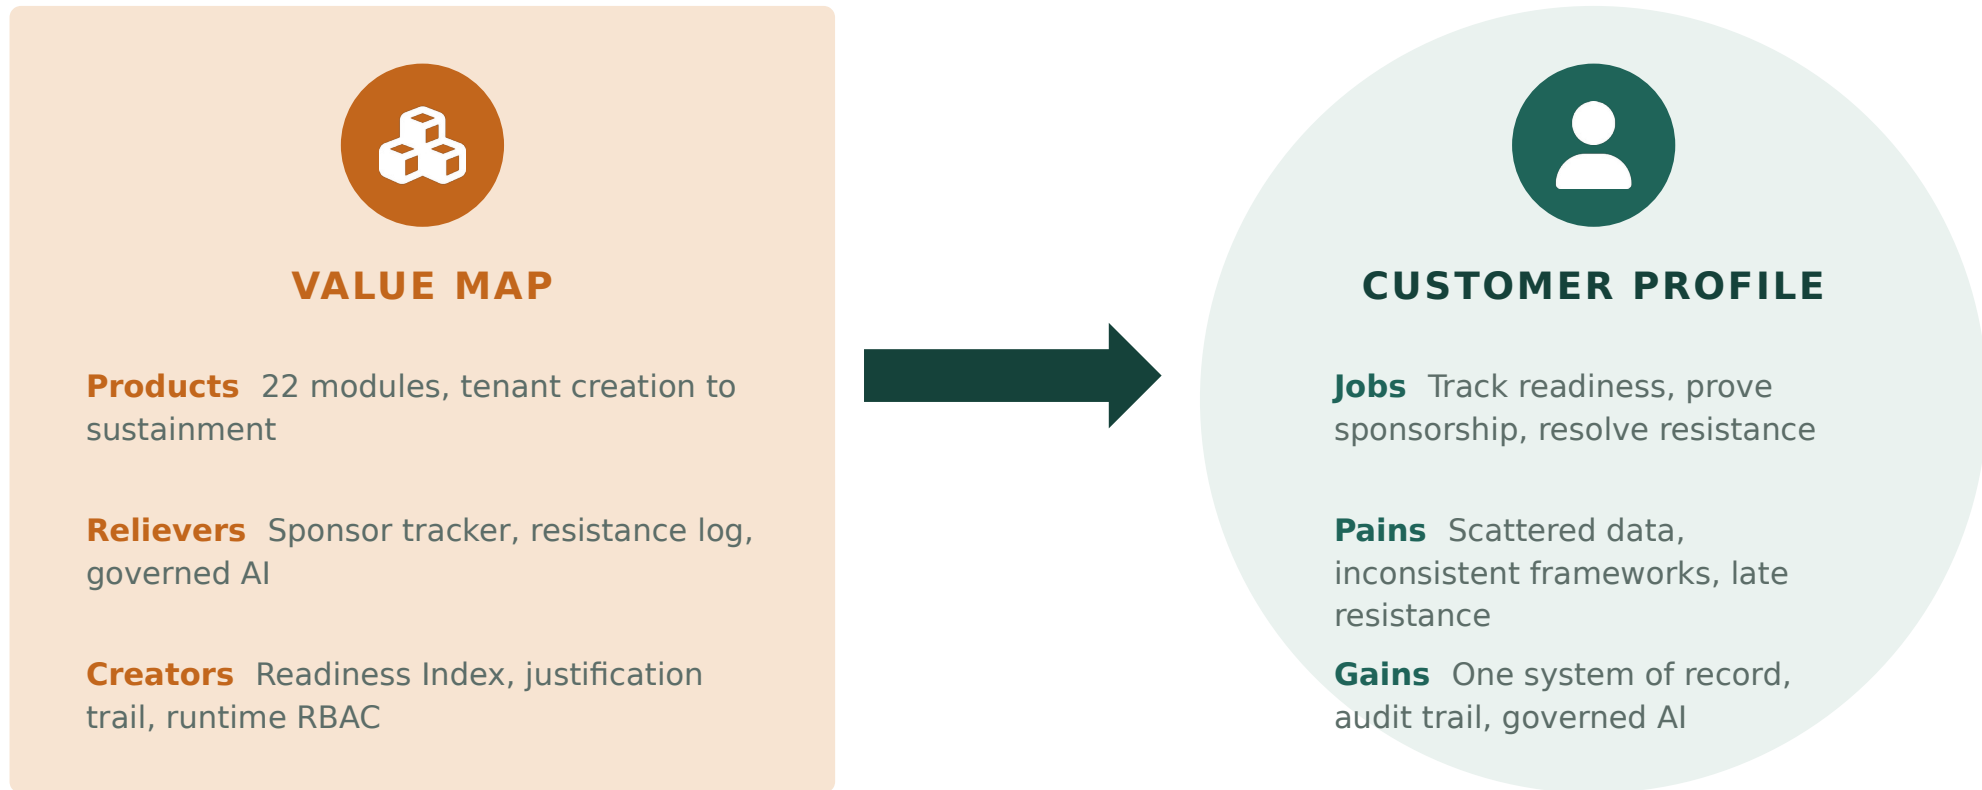

3-language UI (English/French/Arabic) with full right-to-left layout support

Simple to stand up

Windows-installable, no forced cloud dependency, no external data-residency questions

Customer Profile meets Value Map

FIT: every pain has a named reliever; every gain has a named creator — the canvas closes on both sides.

DIFFERENTIATOR 1

Framework-agnostic by design

One shared data model powers every major change framework at once — practitioners work in the vocabulary they already know.

ADKAR

PROSCI

Individual / cohort readiness
— Awareness, Desire,
Knowledge, Ability,
Reinforcement

Kotter's 8 Steps

KOTTER

Organizational —
sponsorship, coalition,
communication, sustaining
momentum

Lewin

UNFREEZE-CHANGE-REFREEZE

The macro-state every
initiative carries, start to
close

Bridges

TRANSITION & KÜBLER-ROSS CURVE

The emotional journey
underneath the numbers

DIFFERENTIATOR 2

Governed AI, not generic AI

14 seeded use cases, every one restricted to a tier that keeps a human as the decision-maker.

ASSISTIVE

The AI observes, analyzes, or suggests. A human performs the task and makes the decision — e.g. flagging a barrier pattern for review.

AUGMENTED

The AI drafts, classifies or summarizes at scale — but a human must review, edit and approve before it is finalized or sent.

AUTONOMOUS

Deliberately out of scope. No journal use case ever takes an irreversible action on its own.

Every suggestion is labeled "AI-generated — review required." Every outcome — accepted, edited, or rejected — is logged to a full usage and override audit trail an Organization Admin can review.

DIFFERENTIATOR 3

Built for the enterprise, not just the pilot

Multi-tenant hierarchy

Group → Organization → Project, with hard data isolation — one installation serves many clients or business units safely

9-role RBAC + runtime Permission Matrix

Reshape who can do what without a code change or a redeploy

Justification governance

Every score/state change is stage-then-justify, appended atomically to a per-project audit log

No forced cloud dependency

Windows-installable, local SQLite persistence — deploy where your data policy requires

PROOF

Proven across 8 transformation types, 3 sectors

journi ships pre-seeded with 14 illustrative cases — evaluation starts from realistic data, not a blank page.

SECTORS SEEDED TODAY

Manufacturing

Logistics & Transportation

Health

The data model is sector-agnostic — new sectors and transformation types extend the same seed pattern.

How journi compares to the status quo

	Spreadsheets & decks	Generic PM tools	Legacy OCM suites	journi
System of record for readiness	✗	✗	~	✓
Framework-agnostic (ADKAR+Kotter+Lewin+Bridges)	✗	✗	~ locked-in	✓
Justified, audited change log	✗	~	~	✓
Governed AI (tiered, human checkpoint)	✗	✗	✗	✓
Lightweight, Windows-installable deploy	✓	~	✗ heavy	✓

What a defensible readiness process protects

Every failed or delayed transformation carries the full cost of the underlying business case — journi protects that ROI, not just a compliance checkbox.

Fewer late surprises

Resistance and sponsorship gaps surface while still cheap to fix, not after go-live

Faster diagnosis-to-action

AI-assisted classification and drafting compress hours of analysis into minutes

Defensible go/no-go evidence

Phase Gates fuse PM and CM inputs into one named, accountable Joint Decision Record

Protected business-case ROI

The investment only pays off if people adopt it — this is where that risk is managed

THE FIT, SUMMARIZED

journi is the right fit if you...

- ✓ Run several concurrent transformation initiatives and need one shared view of readiness
- ✓ Need an audit-ready governance trail behind every readiness score and status change
- ✓ Want AI acceleration without taking on ungoverned compliance or trust risk
- ✓ Operate multilingual and/or multi-site teams, including Arabic-speaking or francophone populations
- ✓ Need a Windows-installable or on-premise-friendly option, not a mandatory cloud subscription
- ✓ Have a PMO and a Change function that currently don't share a single timeline

NEXT STEPS

A low-risk way to prove the fit

01

Seed one real project

Load journi with one active initiative instead of a demo — real stakeholders, real ADKAR baseline

02

30-day evaluation window

Run a single Phase Gate cycle through journi alongside your current process, side by side

03

Decide on evidence

Compare the Joint Decision Record and Readiness Index against what your Steering Committee had before

Let's map the journey.

journi — the human side of change, mapped as a journey
