DYNAMICMS 1.0

DynamicMS — Integrated Management System

Full QMS and QHSE runs for every sector, large companies and SMEs

Agenda

- 01** What the application does
- 02** The lifecycle of a management system
- 03** The main screens
- 04** One full run per sector
- 05** Installation and next steps

One application runs the whole lifecycle of a management system

From context analysis to continual improvement, every step is assigned, recorded and traced.

Lifecycle

12 end-to-end phases, 162 macro processes and 1,572 workflow steps, each with its own input form.

Governance

Business rules, COSO controls, risks, RACSI and KPIs linked to the steps they govern.

Evidence

Nonconformities, audits, documents and registers, with versions and an audit trail.

DEMONSTRATION DATA

The seeded database holds 120 complete runs

60

organizations in 2 groups and 1 independent SME

120

full-run projects: QMS and QHSE for each

84,603

workflow steps with their recorded values

1,141

users across 19 roles

3

languages: English, French, Arabic (right-to-left)

30

sectors: 29 verticals plus universal

Counts after running npm run seed; every value is fictional demonstration data.

The lifecycle

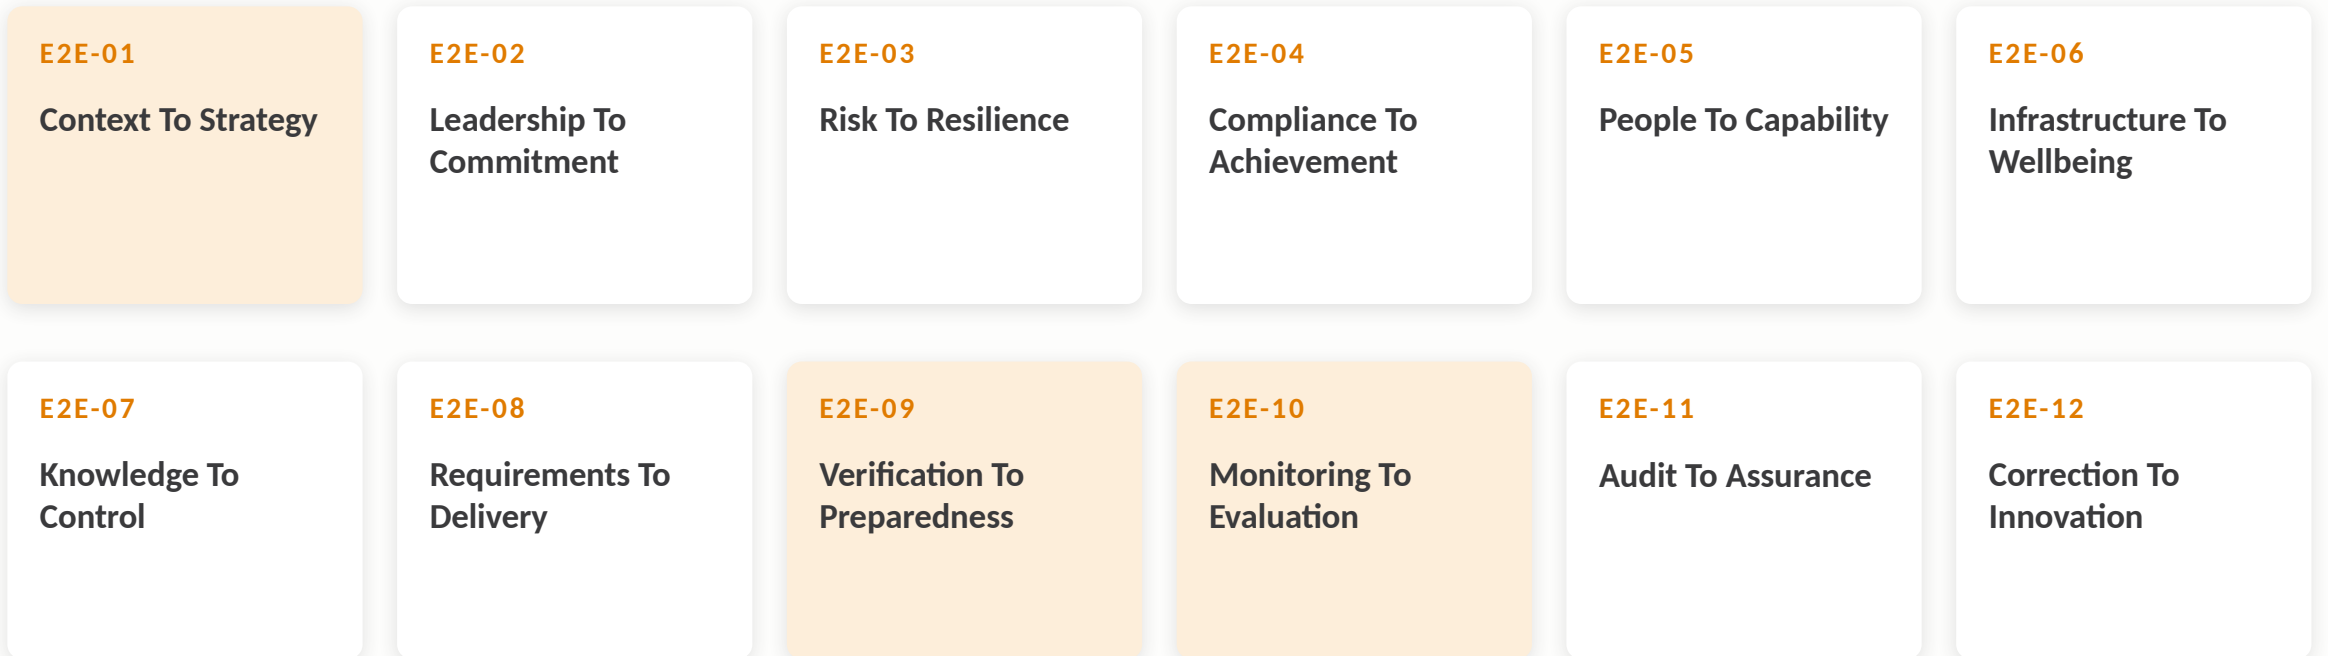

Twelve end-to-end processes run in order; gates close the phases.

END-TO-END PROCESSES

A run moves through twelve phases

Each phase groups the macro processes activated for the organization; a gate with a checklist closes it.

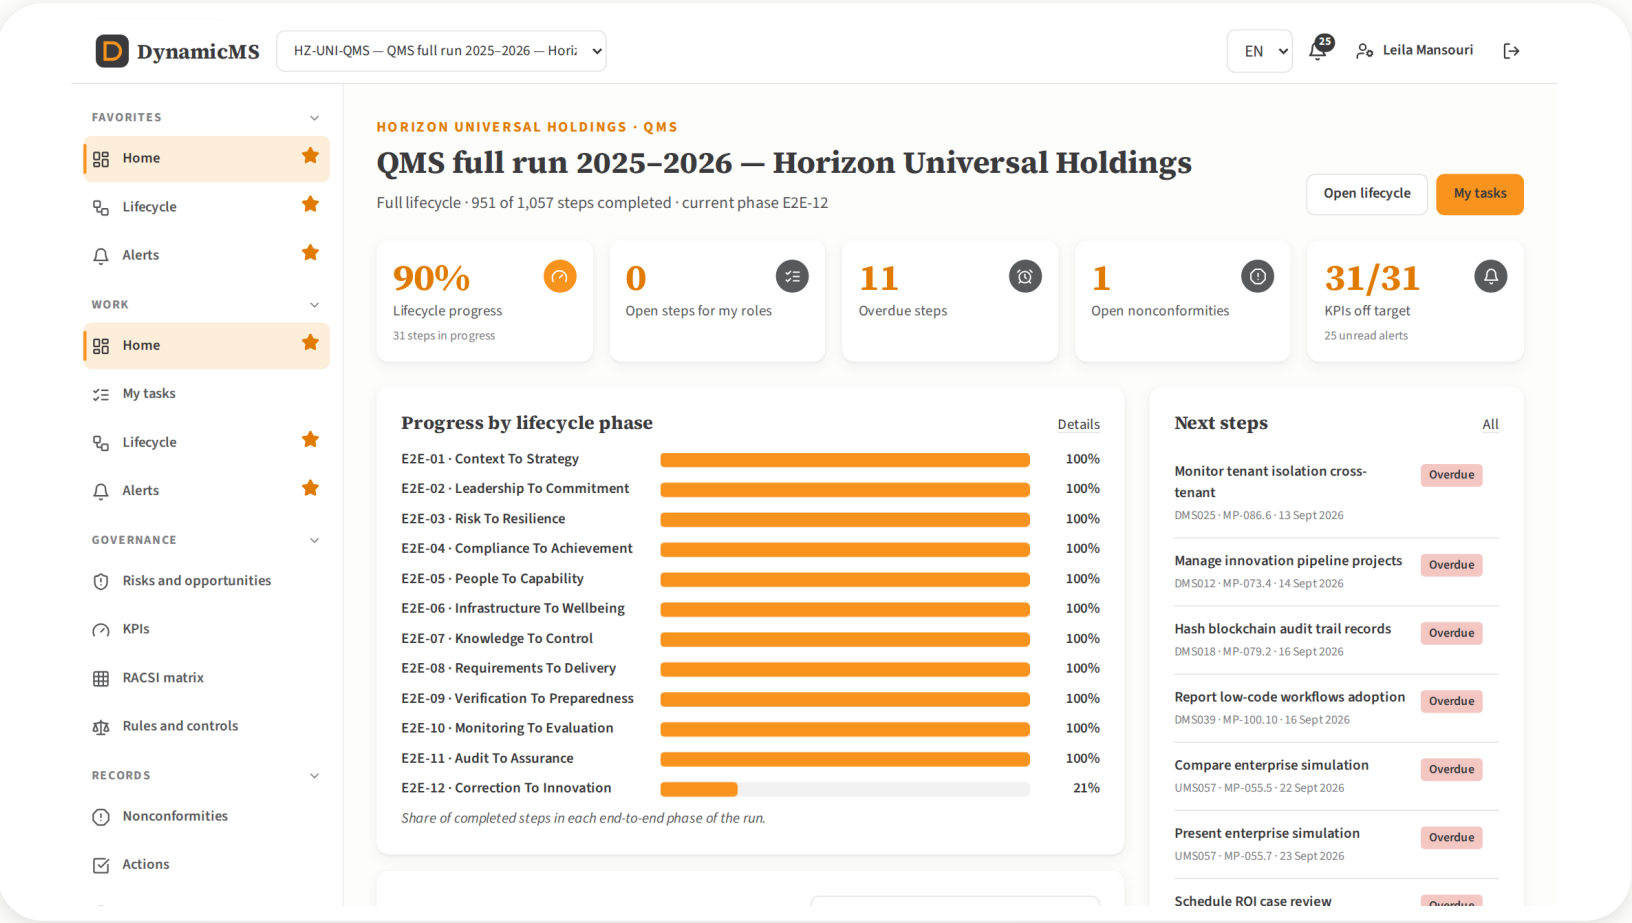

Tinted cards: phases with a gate in every SME track (E2E-01, E2E-09, E2E-10).
