1. About this guide

This guide is for the AI Value teams who use CortexSkills on their own installations (scenario a: private cloud or on-premises; scenario b: localhost on Windows): the platform administrator, the consultants who run projects with customers and the sales people who prepare offers. The installation itself and licence signing are described in the editor installation guide.

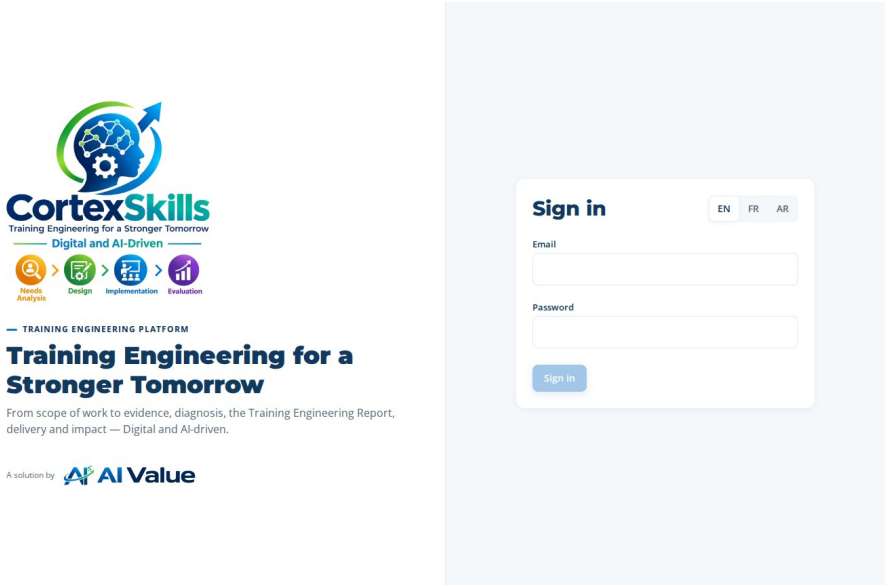

Document	Content
Installation_Guide_Runtime_Editor_Linux_Windows_CortexSkills_EN	Install the editor runtime (Linux, Windows), the signing workstation and licence management (cslic).
This guide	Use the application in the editor edition.
User_Guide_Customer_CortexSkills_EN	The complete run of a project on a real case (private clinic), step by step; it also applies to your installations.

1.1 Editor edition and customer edition

Item	Editor edition (this guide)	Customer edition
Packs & pricing screen, price calculator	Yes	No (page unavailable)
Prices in the catalog, packaging rules	Yes	Removed down to the database
Licence manager (cslic)	Yes, on the signing workstation	No
Signed licence required	Yes	Yes
Reference data (61 organizations)	Yes	Yes
Processes, tasks, steps, AI, documents	Identical	Identical

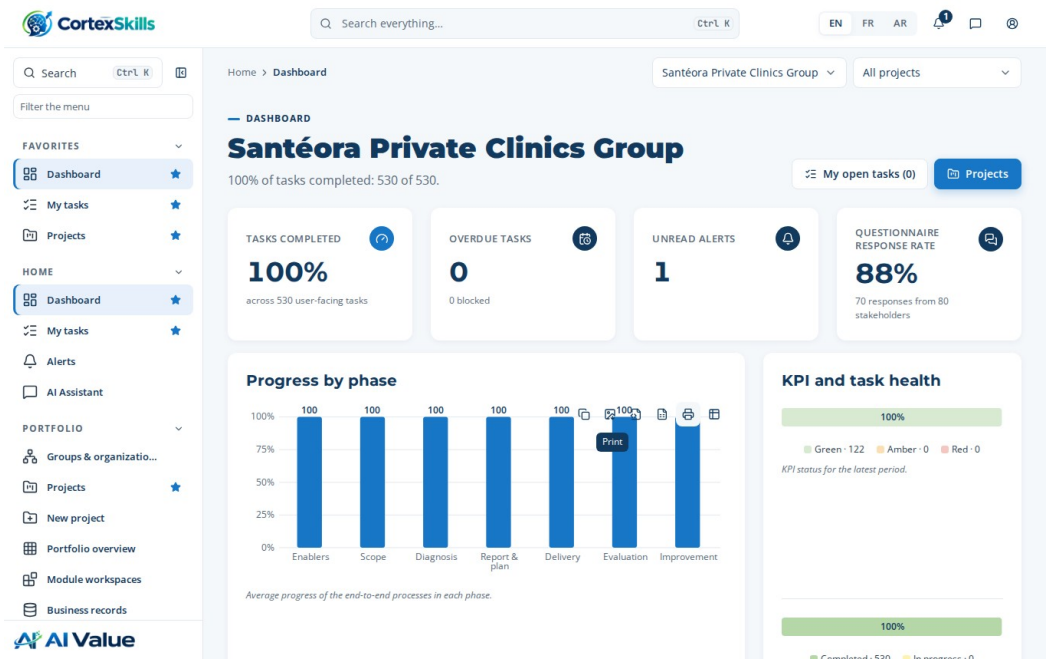

2. Sign in and find your way

Open the address of the installation (https://skills.mydomain.com in scenario a, http://localhost:4000 in scenario b). The sign-in page names no account: no demonstration account exists. At first, only the platform administrator (ADMIN_EMAIL of the .env file) can sign in.

The sign-in page

Area	Use
Top bar	Global search (Ctrl K), language (EN · FR · AR), alerts, AI assistant, your account (password, sign out).
Context selectors	The group or organization, then the project the screens apply to. The platform administrator moves from one organization to another.
Left menu	Favorites, Home, Portfolio, Process design, Governance, AI & knowledge, Documents, Administration. The filter at the top of the menu finds an entry.

The dashboard of the organization chosen

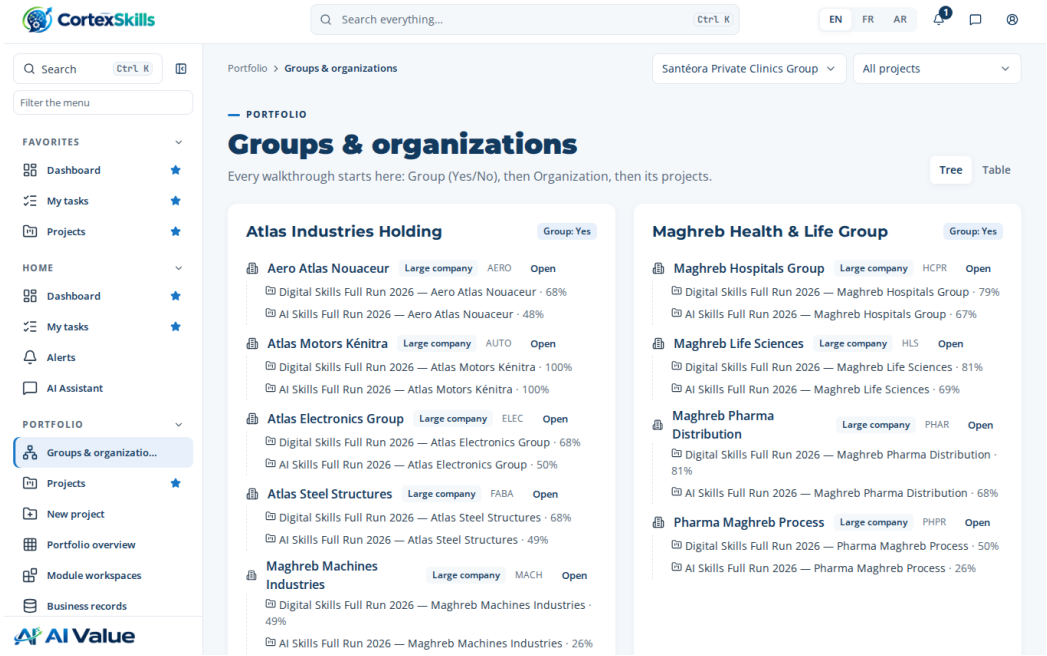

3. The reference organizations

The installation holds 61 reference organizations: a large company and an SME for each sector, plus multi-sector groups. Each has two complete projects (Digital and AI), with all their processes, tasks, steps, questionnaires, plans, documents and indicators, in English, French and Arabic. They are a showcase and a model: demonstrations, training of your consultants, sample deliverables.

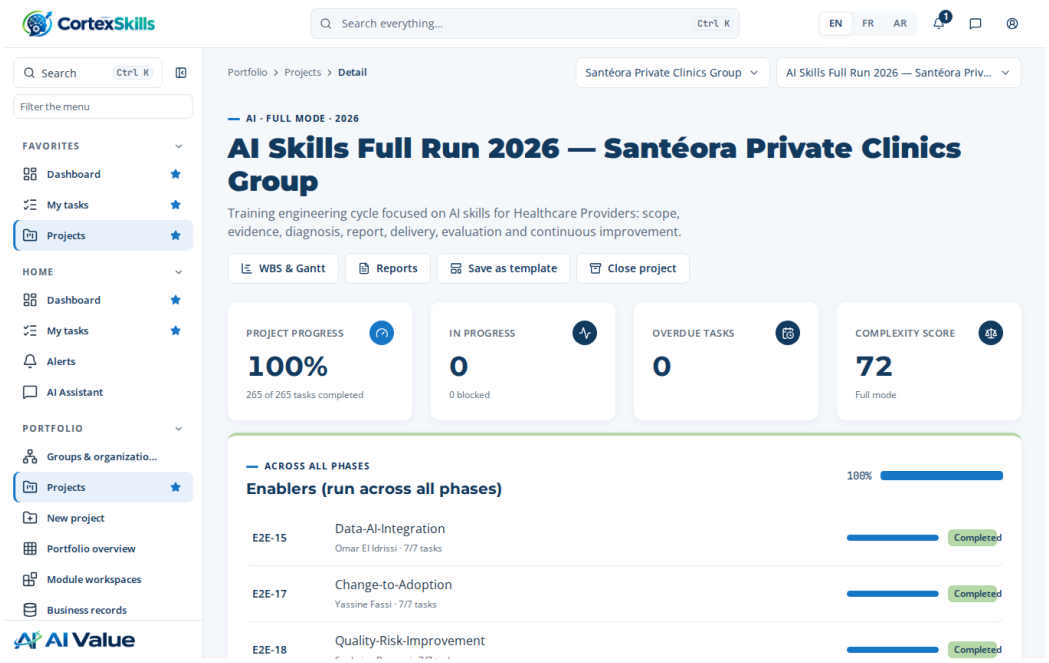

Portfolio › Groups and organizations: the tree of the groups, their organizations and their projects (Tree or Table view).

Click “Open” next to an organization, then a project: the project opens on its progress by phase.

In a project, open a process then a task: its steps, their entries, “Your result” and the Documents tab show what a completed project contains.

Portfolio › Groups and organizations

A completed reference project

Keep in mind

The people of the reference organizations cannot sign in: their accounts are disabled.

The reference organizations have no licence and count in no licence.

Do not run a real customer project in a reference organization: create the customer's organization (chapter 4).

4. Customer organizations and users

4.1 Create a customer's organization

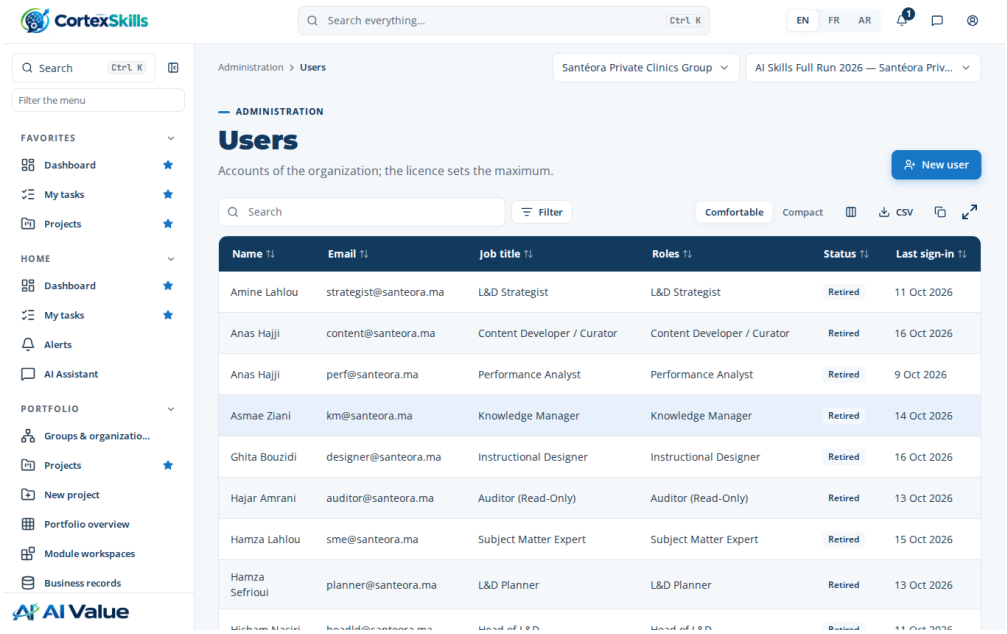

On your installations, a customer's organization is created with the installation console, then receives its licence (chapter 6). The command also creates the organization's first administrator:

```
cortexskills admin org-create --name "Example Clinic" --domain example-clinic.com \
  --admin-email admin@example-clinic.com --admin-name "Clinic Admin" --admin-password
'Str0ng#Passw0rd2026' \
  --lang en --sector HCPR --segment SME --employees 95 --city Marrakech
cortexskills admin licence-request --org example-clinic.com
```

On a Linux server, prefix with sudo -u cortexskills ./; on Windows, use .\cortexskills.cmd. The sector code (--sector) links the organization to its vertical: the sector's project templates, competencies, AI themes and questionnaires.

4.2 Users and roles

Administration › Users: the organization administrator creates the accounts of their teams, gives them one or more roles (head of L&D, analyst, HR director, manager…) and disables them when they leave. The number of active users is limited by the licence; a user beyond it is refused with a message naming the limit.

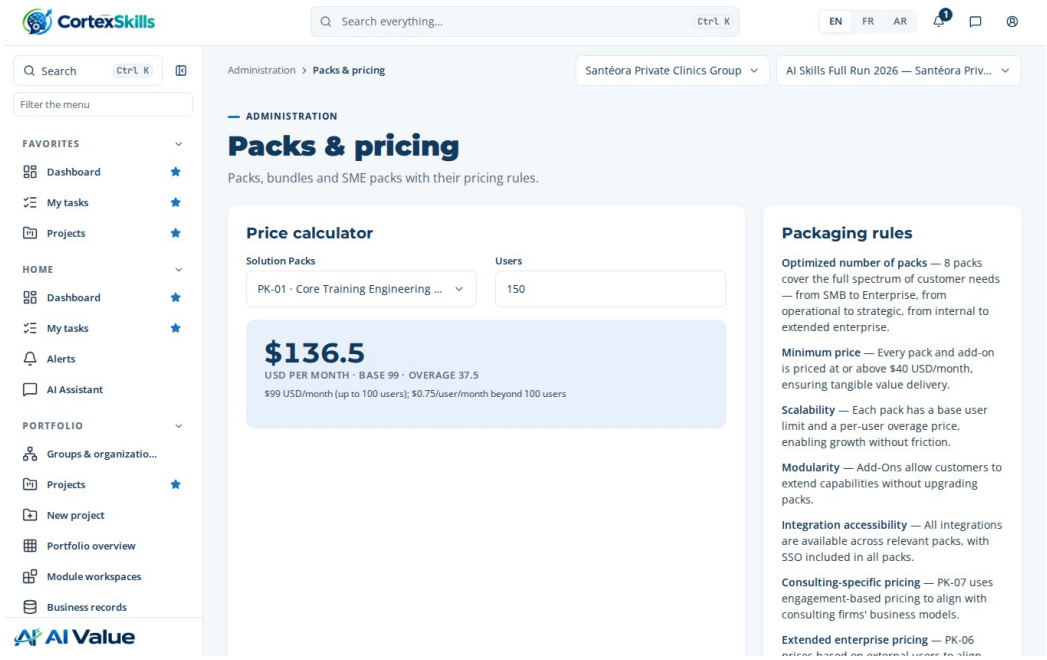

Administration › Users

A forgotten password is reset from this screen, or with the console: cortexskills admin password --email … --password …. Administration › Permissions shows what each role can see and do.

5. Offers, prices and quotations

Administration › Packs & pricing exists only in the editor edition. It shows the packs, bundles, SME packs and add-ons with their prices, and a calculator: choose an offer and a number of users, the screen gives the monthly amount (base price + users beyond those included × overage price).

Administration › Packs & pricing: the calculator

5.1 Packs

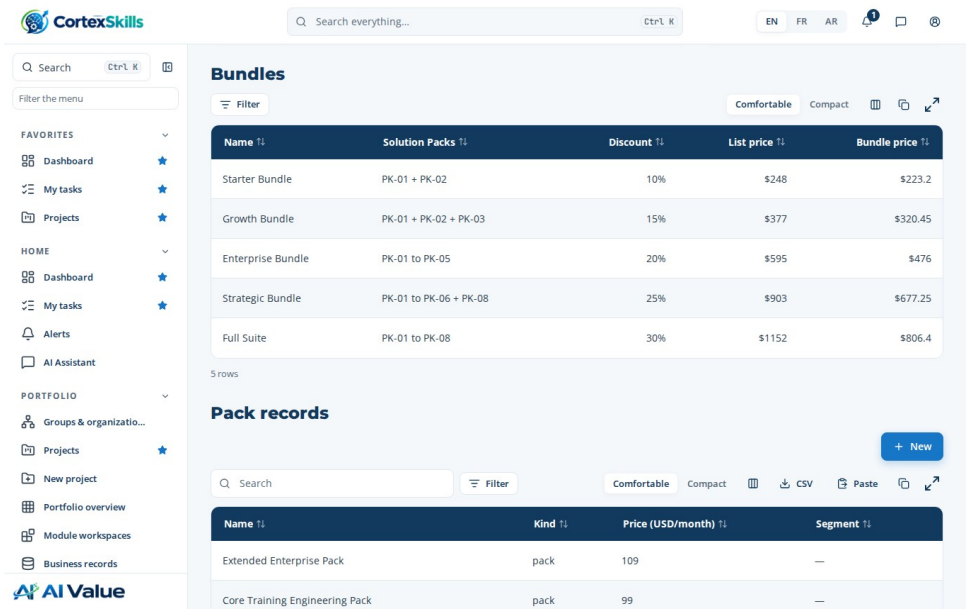

Pack	Name	Price / month	Users included	Overage / user
PK-01	Core Training Engineering Pack	$99	100	$0.75
PK-02	Learning Delivery & Experience Pack	$149	250	$0.6
PK-03	Assessment, Analytics & ROI Pack	$129	500	$0.5
PK-04	Compliance & Certification Pack	$99	300	$0.55
PK-05	Talent & Mobility Pack	$119	300	$0.65
PK-06	Extended Enterprise Pack	$109	200	$0.8
PK-07	Consulting & Diagnostic Pack	$249	50	$5
PK-08	Strategic Workforce & Governance Pack	$199	500	$0.45

5.2 Bundles and SME packs

Offer	Content	Discount	Price / month
Starter Bundle	PK-01 + PK-02	10%	$223.2
Growth Bundle	PK-01 + PK-02 + PK-03	15%	$320.45
Enterprise Bundle	PK-01 to PK-05	20%	$476
Strategic Bundle	PK-01 to PK-06 + PK-08	25%	$677.25
Full Suite	PK-01 to PK-08	30%	$806.4

SME pack	Price / month	Users included	Overage / user
SME-ESS — SME Essentials Pack	$49	25	$1.2
SME-GRO — SME Growth Pack	$129	50	$1
SME-CMP — SME Complete Pack	$249	100	$0.9

Each bundle includes 500 users. Add-ons: from $40 to $69 per month (full list on the screen and in chapter 8 of the editor installation guide). A minimum of 5 users applies to SME packs.

The bundles and the offer records, further down the same page

What customers see

No price, no quotation and no commercial rule appear in the customer edition: the Packs & pricing page is unavailable there.

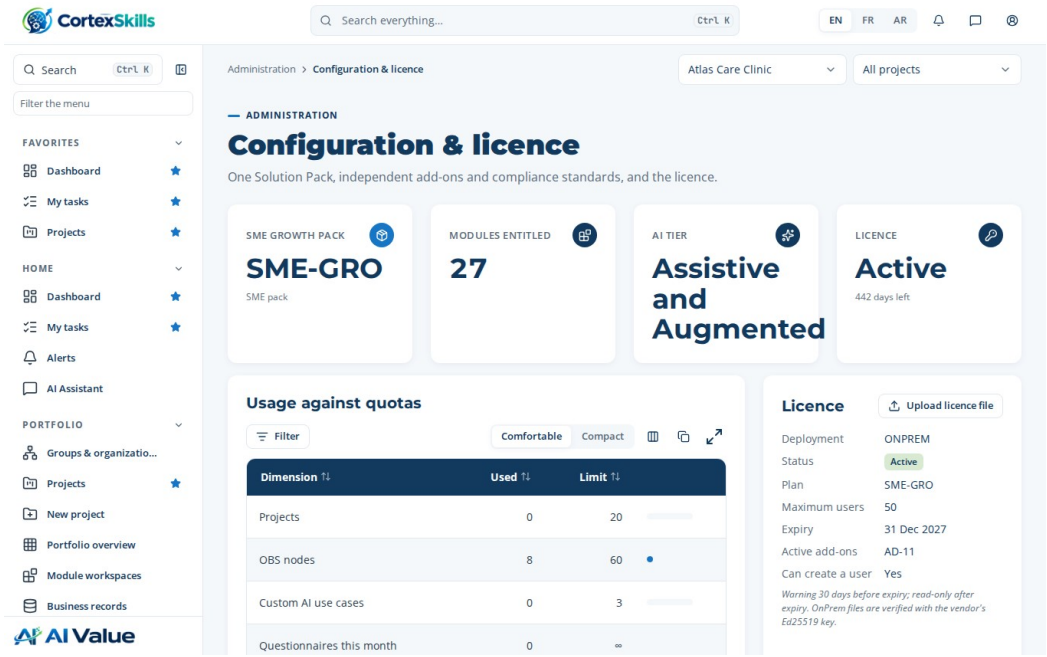

The customer sees their plan, users, add-ons and end date in Administration › Configuration and licence.

6. Licences in the application

A licence is signed on your signing workstation (cslic, editor installation guide, chapter 6) for an organization's Organization ID. It is installed on the installation concerned in two ways:

Console: cortexskills admin licence-install --file licence/<file>.lic (no restart).

Screen: the organization administrator opens Administration › Configuration and licence, then "Upload licence file".

Administration › Configuration and licence of a licensed customer organization

Screen area	What it shows
Pack · Modules · AI tier · Licence	The licence's plan, the number of modules opened, the AI tier (Assistive, or Assistive and Augmented) and the state of the licence with the days left.
Usage against quotas	Projects, OBS nodes, custom AI use cases, questionnaires this month: used and limit of the offer.
Licence	Deployment, status, plan, maximum users, expiry, active add-ons.

The plan, users and add-ons are not changed on screen: a change is a new version of the licence (cslic update or renew), installed the same way. Thirty days before the end, the administrators are warned; after the end, the organization becomes read-only.

7. Run a project with a customer

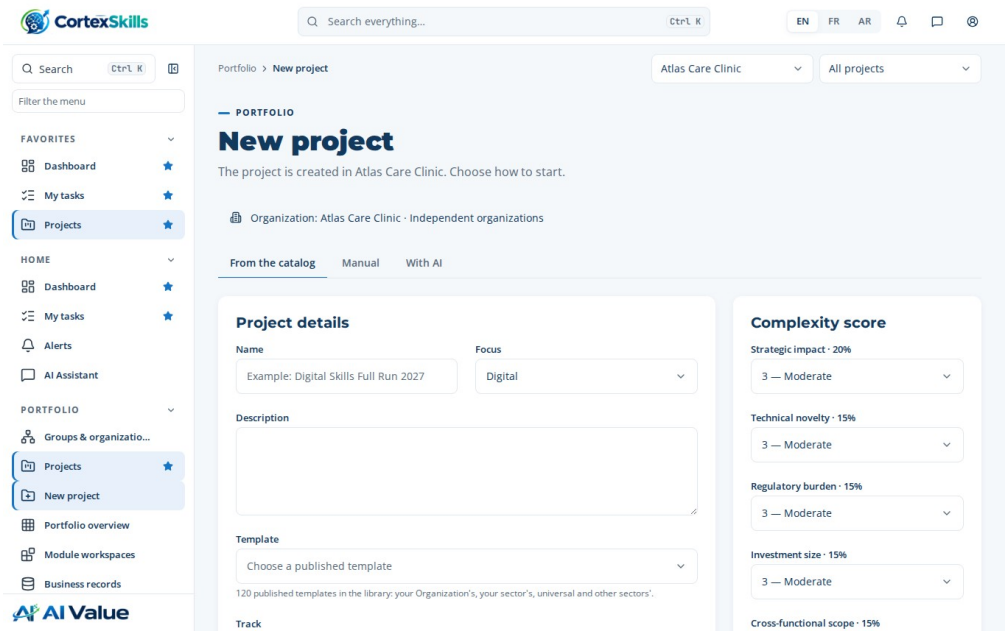

Projects are run the same way in the editor and customer editions. The complete run, with each step and what to type, is in the customer user guide (real case of a private clinic). The essentials:

Create the project: Portfolio › New project, “From the catalog” tab: Name, Focus (Digital, AI), Description, then Template. The template list holds those of the organization, of its sector, the universal templates and those of the other sectors.

Follow the phases: each end-to-end (E2E) process has its tasks and steps; the gates (G1 to G5) are decided “Go” by the steering committee chair.

Fill a step in three ways: manual entry or pasting a table, “From the template”, or “Propose rows with AI”; each proposal is read and validated by a person.

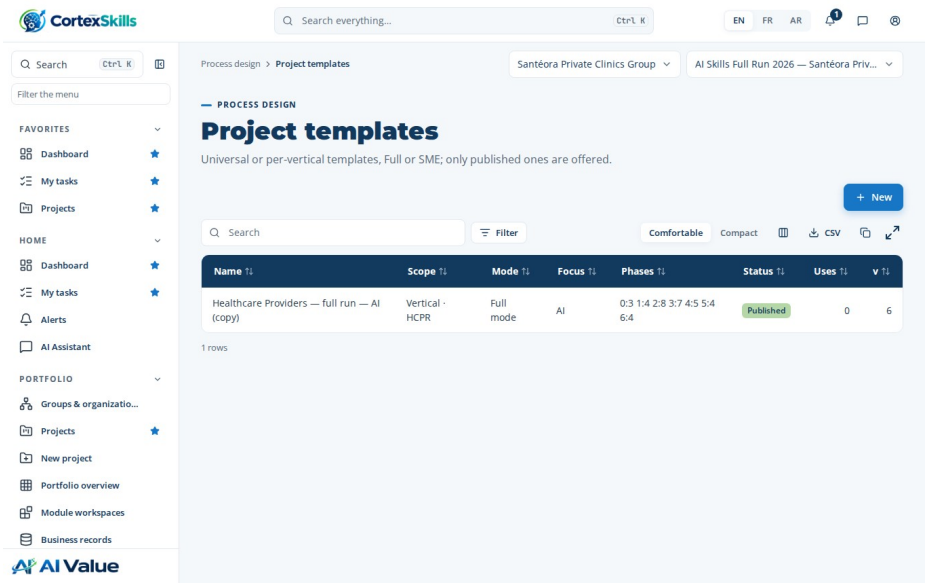

Produce the documents: each process generates its documents (DOCX, PDF, XLSX) from the data entered, as a dated version.

New project, in the customer organization

7.1 Project templates

Process design › Project templates: the published templates (universal or per sector, full or SME track). “Save as template” on a completed project creates a new one, to publish so it is offered at creation.

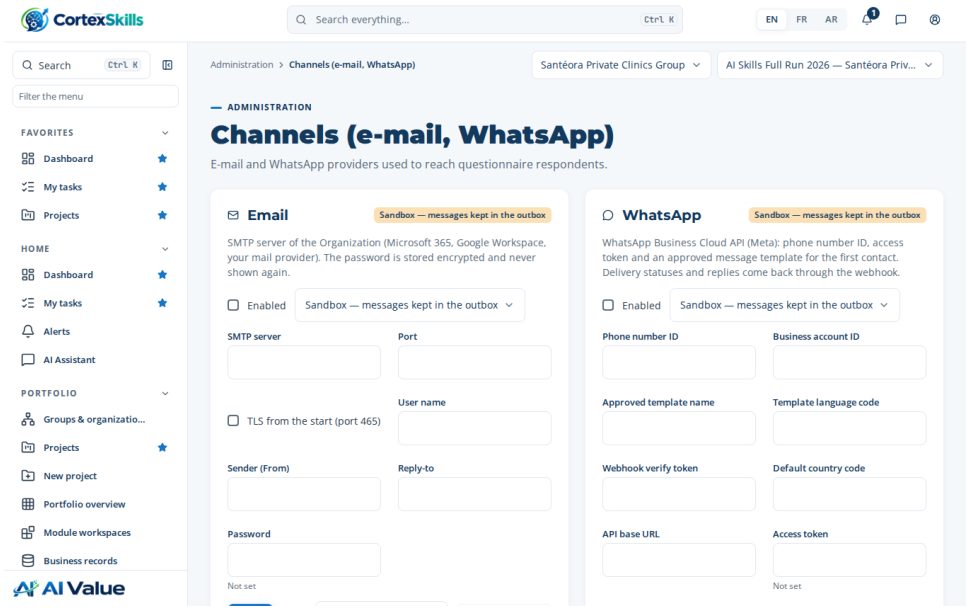

Process design › Project templates

8. Platform settings

8.1 Channels: e-mail and WhatsApp

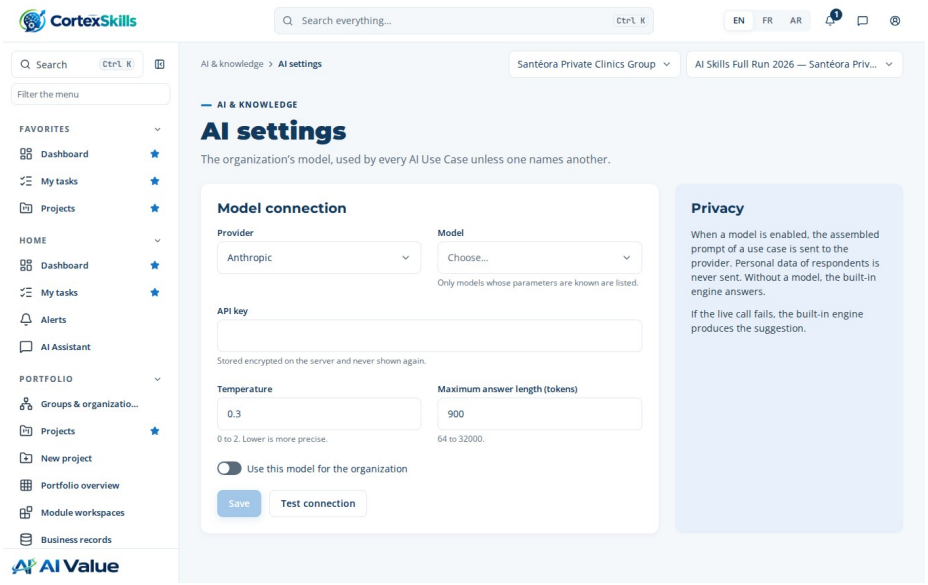

Administration › Channels: the organization's mail server (SMTP) and WhatsApp Business account, each in "Sandbox" (messages kept without leaving, to rehearse a demonstration) or "Live". "Send a test" confirms the provider accepts the messages. The SMTP_* and WHATSAPP_* values of the .env file are used by default for organizations without their own setting.

Administration › Channels

8.2 AI

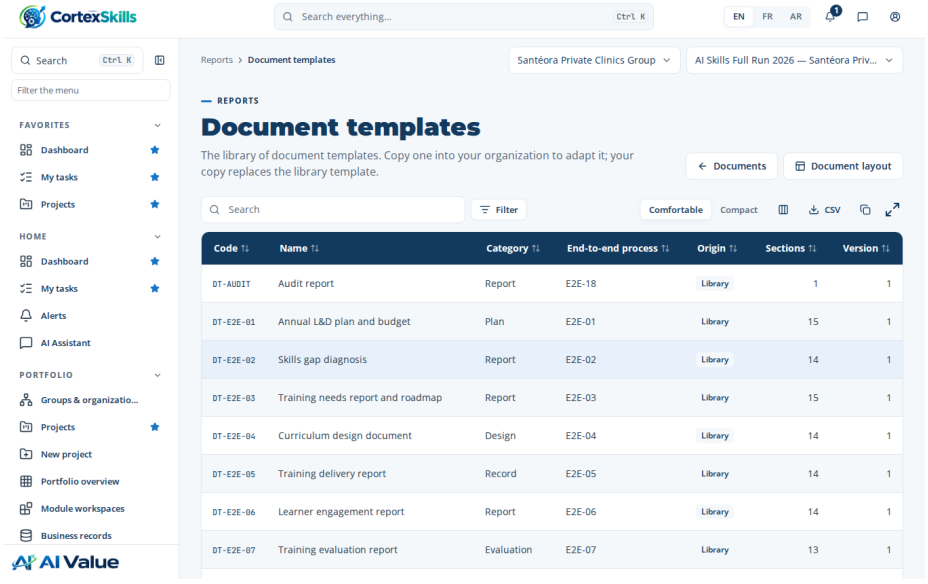

AI & knowledge › AI settings: the provider and model used by the organization's AI use cases, with an encrypted API key. Without an enabled model, the built-in engine produces the proposals. The respondents' personal data is never sent to the provider; each proposal is validated by a person and logged (AI & knowledge › Usage).

AI & knowledge › AI settings

8.3 Document templates

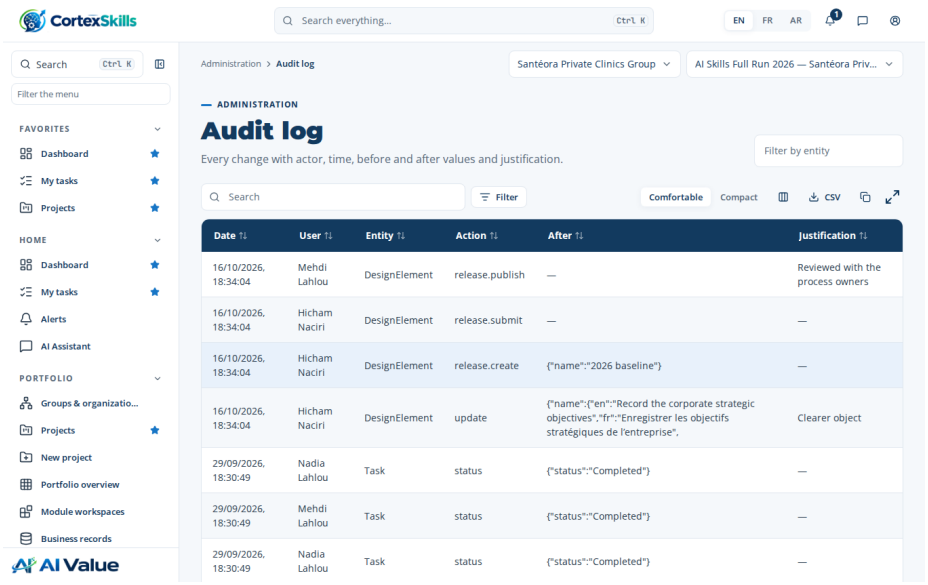

Documents › Templates: the library of document templates (scope of work, campaign reports, training plan, evaluation…). Documents › Layout applies the organization's charter (logo, colours, fonts) to every generated document.

Documents › Templates

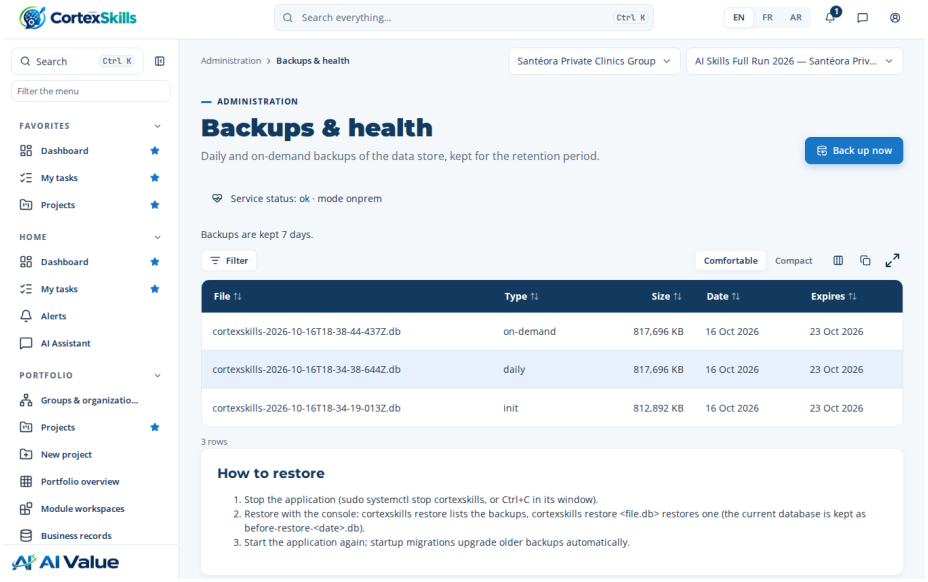

9. Audit, traceability and backups

Administration › Audit log: every administration action and every decision (user created, licence installed, gate decided, document published) with its date, author and before and after values. Administration › Traceability links requirements, processes and records.

Administration › Audit log

Administration › Backups & health: the state of the service, the daily and on-demand backups (“Back up now”) and the restore procedure. Copy the backups off the server every day (editor installation guide, 4.4).

Administration › Backups & health

10. Good practices

- One organization per customer, one licence per organization; never mix the data of two customers in one organization.
- Demonstrations: use the reference organizations, or a demonstration organization under a short licence, with the channels in “Sandbox”.
- Before a pilot: set the channels to “Live”, check PUBLIC_URL (the links sent must open on a phone) and test a send.
- Never quote a price from a customer installation: prices do not exist there; prepare the quotation on your editor installation.
- Change your password at first sign-in and keep at least two administrators per organization (two-person rule to publish).

11. Troubleshooting

What you see	Cause	What to do
“The licence of this Organization is not active”	Licence not installed, expired or removed.	Install the licence (chapter 6); check its end date.
Creating a user is refused	Maximum number of users of the licence reached.	Disable an unused account or issue a new version of the licence (more users).
A module does not appear in the menu	The licence’s plan does not include it.	Change the plan or add the add-on with a new version of the licence.
An account of a reference organization is refused	These accounts cannot sign in.	Sign in as platform administrator.
The Packs & pricing page is unavailable	You are on a customer installation.	Use your editor installation.
Messages do not leave	Channel in “Sandbox” or not enabled.	Administration › Channels: “Enabled”, “Live”, then “Send a test”.
