

NON-CONFORMITY MANAGEMENT, GOVERNED BY DESIGN

NCP Solver

DynamicMS Suite

One governed platform to detect, resolve, and learn from every non-conformity — combining disciplined S1–S7 problem solving, integrated governance & compliance, and AI assistance that always keeps a human in control.

End-to-End Process Rigor

A disciplined 7-stage path (S1–S7): detection, containment, root cause, corrective action, and capitalized lessons learned.

Integrated Governance & Compliance

COSO-aligned Controls, a live Risk Register, Business Rules, and RACSI accountability — audit-ready by default.

Governed AI Assistance

14 cataloged AI use cases, always reviewed by a human — suggestion, never autonomous action.

7 Process Stages · 14 Governed AI Use Cases · 24 RBAC Modules · 3 Languages incl. Arabic (RTL)

AI That Assists — Never Decides Alone

ASSISTIVE

The AI observes, analyzes, and suggests. A human performs the task and makes every decision.

Classification · Root Cause Mining · Evaluation

AUGMENTED

The AI drafts a substantial part of the work — but nothing is finalized without human review, edit, and approval.

Problem Structuring · REX Generation

Autonomous AI is deliberately out of scope — no AI use case may take an irreversible action on its own.

RAG-Grounded

Every suggestion cites real methodology references — never a fact outside the data.

Deterministic-First

A built-in engine always computes the result; a real LLM only augments it, with automatic fallback.

Full Usage Audit

Accepted, edited, or rejected — every outcome is logged, append-only, for compliance.

Governed Activation

Organization-wide control, with per-project override, so AI runs only where it's wanted.

Every Non-Conformity. A Governed Path to Improvement.

Process Discipline at Scale

Every non-conformity follows the same governed S1–S7 path, from detection to capitalized lessons learned.

Compliance Built In

COSO-aligned controls, a live risk register, and RACSI accountability — audit-ready from day one.

AI You Can Trust

Every suggestion is grounded, labeled, logged, and reviewed. Never autonomous.
