

POWERACT CONSULTING PRESENTS

journi

The human side of change, mapped as a journey.

Change programs fail for human reasons, not technical ones — yet most organizations instrument the go-live and never the people. journi gives Change Managers, sponsors, and executives one governed, AI-assisted platform to measure readiness, diagnose resistance, and prove adoption — start to finish, scoped to exactly what each role should see.

22

modules — one lifecycle,
from tenant setup to sustainment

4

frameworks unified —
ADKAR, Lewin, Bridges, Kübler-Ross

9

RBAC roles — the right data,
for the right person, always

AI USE CASES

Built for the moments Change Managers actually face

Every use case is Assistive or Augmented — grounded in your own data, never autonomous.

14

AI use cases across the
change lifecycle

9 Assistive 5 Augmented

Spot why someone's stuck

Reads open-text survey answers and flags the likely reason — e.g. “fear of losing their role” — for a Change Manager to confirm.

Coach the coach

Turns a flagged team barrier into a ready-to-use coaching conversation, tailored for that manager and that team.

Catch change overload early

Warns when too many changes are about to hit the same population at once, and suggests a better rollout window.

Report up in plain English

Turns raw ADKAR scores into a short, readable narrative a sponsor can absorb in under a minute.

Two tiers. Always a human in the loop.

journi deliberately excludes Autonomous AI — no use case ever takes an irreversible action on its own.

Assistive

The AI observes, analyzes, or suggests. A person still performs the task and makes the decision.

Example: flagging a likely resistance pattern for a Change Manager to act on.

Augmented

The AI drafts, classifies, or summarizes at scale — but a person must review, edit, and approve before it's final.

Example: drafting an executive readiness narrative for sign-off.

No Autonomous AI.

Every suggestion is labeled, logged, and reviewable — governance isn't a setting, it's the architecture.

journi doesn't just track change. It proves it — safely, at scale, in every language your workforce speaks.
